

# A smarter way

to enhance comfort  
at home.

Somfy Zigbee 3.0 - a complete indoor  
shading solution that perfectly optimises light,  
temperature and privacy in your home.

**somfy**

# A next generation connected home shading solutions

---

**Our smart shading solution featuring Zigbee 3.0 technology is a reliable and convenient way to improve natural light management, create comfort with the right temperature at all times and support privacy. Somfy's solution for indoor blinds and curtains is designed to make your life easier. Over 3.5 million households in Northern Europe are already connected with Somfy radio-controlled solutions.**

## Easy to install in every home, for every lifestyle

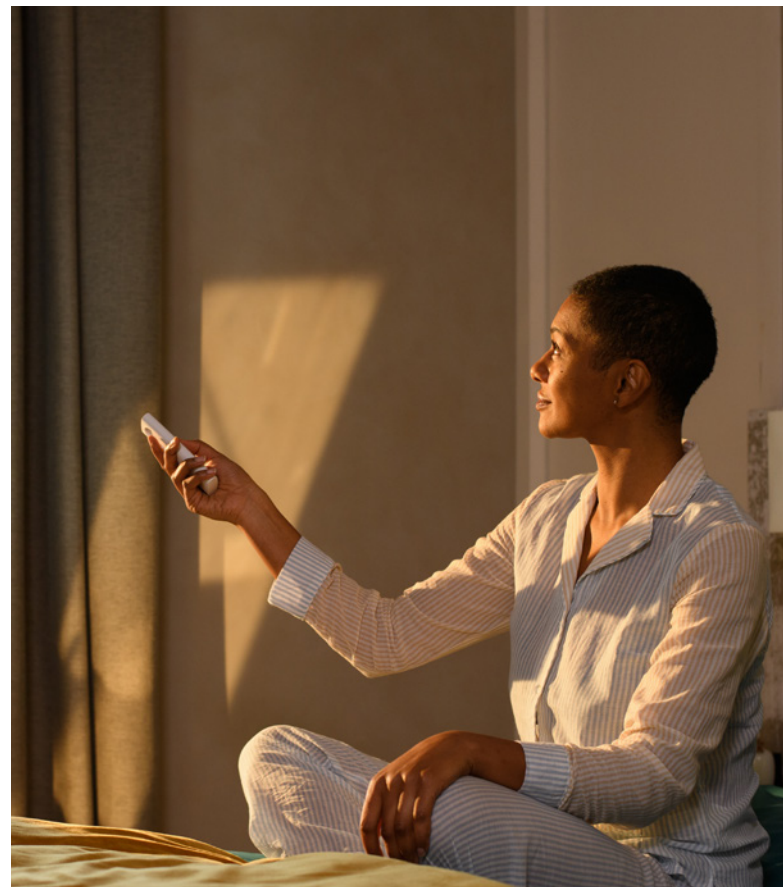

Fitting most types of curtains and blinds, our solutions can be seamlessly integrated into the window covering of your choice. The fabric stays fresh and neat longer, as you never need to touch it. Both the wired and wirefree versions are discreet and eliminate cords to provide a child-safe and pet-friendly solution. No permanent connection with 230 V is required for our WireFree solutions, the battery only needs charging two times per year, so there is no need for additional wiring or inconvenient construction works. To enhance your experience, add new devices and manage your indoor and outdoor home equipment to match your needs and lifestyle.

## Create scenes for more comfort and efficiency

With programmed scenes, you can automate the operation of your shading solution and other connected applications to fit your activities. For example, activate your 'Away' scene when you leave the house, automatically closing the blinds, turning off lights and switching on the alarm when you leave home.

## Easy to operate

Somfy products are easy to operate with a simple-to-use TaHoma app or voice control or a dedicated remote control.

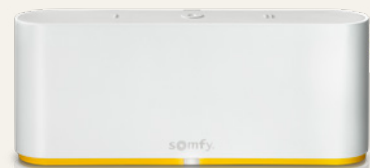

# Make your life easier

Smart blinds and curtains automatically operate - no effort required

Motorised blinds and curtains can help you to balance the light, remove the glare, and always be comfortable. By connecting your shading solutions to Somfy's TaHoma smart home system, light and temperatures can be automatically set to be ideal at all times, so you never have to think about it.

## Compatible with Somfy TaHoma and a wide range of partner products

Smart blinds and curtains are a big step towards making your life at home more comfortable and convenient. The wide range of compatible partner products allows you to optimise comfort in and around the home even further.

Available on the App Store

### Start your day with natural light

When your alarm goes off at 7 a.m., you wake up gently as your curtains open automatically and silently, and your compatible Philips Hue lights gradually brighten.

### Work without disturbance

When you work from home, adjust your blinds with a remote control to soften the sun glare on your computer screen. Your automatic lights adjust in response. Create a perfect balance between natural and artificial light, for optimal visual comfort.

### Keep your temperature comfortable

As soon as the temperature inside exceeds 25°C in the summer, your curtains close automatically. In winter, close the shutters after the sun has gone down to keep the heat in, preventing extra heating costs for your home. This is a simple way to keep your temperature comfortable and save energy.

### Relax at the end of the day

In the evening, use your voice to close your blinds for more privacy, turn on your lights, and play your favourite playlist on your compatible Sonos speaker. Without lifting a finger. Ease into your evening.

# Your connected eco-system

Control your home equipment as you prefer and connect with other devices

Convenience means having control at your fingertips. By centralising, controlling and automating your blinds and curtains, Somfy's smart shading solution adapts to all your needs. You have multiple ways to control your interior window coverings.

## Ways to control

### TaHoma app

The TaHoma app is your simple interface for controlling your smart home equipment, at any time and from anywhere, whether you are at home or away. Check your connected equipment for the real-time status of each device.

### Voice control

#### Voice control compatible:

Voice control compatible through TaHoma: you can use Apple Home, Amazon Alexa or Google Home. Just ask and it is done!

### TaHoma switch

TaHoma switch is Somfy's smart control that centralises and connects your complete smart home eco-system: indoor shading as well as all the connected home equipment. With programmed scenes, you can automate the operation of your window coverings and other connected applications to fit your activities without you even needing to think about it.

### Remote control

Choose from different Somfy remote controls, **also** if you are not connected, to control your equipment

## Increase home comfort

TaHoma switch features several technologies:

and is compatible with close to **300 types of Somfy products and major home equipment brands.**

You create your ideal home environment, at your own pace, thanks to an interoperable and scalable smart home solution.

And many more...

# Somfy solutions for peace of mind at home

## Comfort

Somfy's smart shading solutions are a reliable and convenient way to improve comfort at home. They make your life easier and more convenient. With the new Zigbee protocol, our solutions are even easier to integrate into your smart home solutions.

## Reliability

Choosing Somfy means choosing a long-term solution that is easy to use and works every time. And you have the comfort of knowing that if anything ever does go wrong, you can count on efficient service. Your installer can troubleshoot and even service issues remotely, offering you quicker, seamless and more convenient service. All products are covered by a five-year warranty.

## Sustainability

With easily programmable scenes, you can increase the energy efficiency of your home. By automatically regulating the temperature inside, you save energy costs. Our ACT FOR GREEN label guarantees that the product has been designed to have a reduced environmental impact throughout its life cycle.
